Features

Broadcast

Background

Given
the internet is reachable 👍 (163ms)

And
an initialised environment 👍 (009ms)

And
the system is bootstrapped 👍 (102ms)

Scenario: A command is issued with no prior Broadcast received

Given
no prior Broadcast was received 👍 (000ms)

And
a new Broadcast "This is a LIVE Broadcast!" with id "12345" is available 👍 (029ms)

When
I enter "sdk version" 👍 (101ms)

Then
I see "This is a LIVE Broadcast!" 👍 (001ms)

```
Output:

This is a LIVE Broadcast!
SDKMAN x.y.z
```

Scenario: A command is issued where the prior Broadcast was different to the Live one

Given

a prior Broadcast "This is an OLD Broadcast!" with id "12344" was issued 👍 (000ms)

And

a new Broadcast "This is a LIVE Broadcast!" with id "12345" is available 👍 (017ms)

When

I enter "sdk version" 👍 (100ms)

Then

I see "This is a LIVE Broadcast!" 👍 (000ms)

```
Output:

This is a LIVE Broadcast!
SDKMAN x.y.z
```

Scenario: A command is issued where the prior Broadcast was the same as the Live one

Given

a prior Broadcast "This is a LIVE Broadcast!" with id "12345" was issued 👍 (000ms)

And

a new Broadcast "This is a LIVE Broadcast!" with id "12345" is available 👍 (016ms)

When

I enter "sdk version" 👍 (100ms)

Then

I do not see "This is a LIVE Broadcast!" 👍 (000ms)

```
Output:

SDKMAN x.y.z
```

Scenario: A Broadcast command recalls a prior Broadcast

Given

a prior Broadcast "This is an OLD Broadcast!" with id "12344" was issued 👍 (000ms)

And

a new Broadcast "This is an OLD Broadcast!" with id "12344" is available 👍 (014ms)

When

I enter "sdk broadcast" 👍 (100ms)

Then

I see "This is an OLD Broadcast!" 👍 (000ms)

```
Output:

This is an OLD Broadcast!
```

Scenario: A Broadcast command is issued with no prior Broadcast received

Given

no prior Broadcast was received 👍 (000ms)

And

a new Broadcast "This is a LIVE Broadcast!" with id "12345" is available 👍 (012ms)

When

I enter "sdk broadcast" 👍 (100ms)

Then

I see "This is a LIVE Broadcast!" 👍 (000ms)

```
Output:

This is a LIVE Broadcast!
```

Command Line Interop

Background

Given

the internet is reachable 👍 (027ms)

And

an initialised environment 👍 (003ms)

And

the system is bootstrapped 👍 (101ms)

Scenario: Enter sdk

When

I enter "sdk" 👍 (100ms)

Then

I see "Usage: sdk <command> [candidate] [version]" 👍 (000ms)

And

I see "sdk offline <enable|disable>" 👍 (000ms)

```
Output:

broadcast message

Usage: sdk <command> [candidate] [version]
       sdk offline <enable|disable>

   commands:
       install   or i    <candidate> [version]
       uninstall or rm   <candidate> <version>
       list      or ls   [candidate]
       use       or u    <candidate> [version]
       default   or d    <candidate> [version]
       current   or c    [candidate]
       outdated  or o    [candidate]
       version   or v
       broadcast or b
       help      or h
       offline           [enable|disable]
       selfupdate        [force]
       flush             <candidates|broadcast|archives|temp>

   candidate  :  the SDK to install: groovy, scala, grails, akka, etc.
                 use list command for comprehensive list of candidates
                 eg: $ sdk list

   version    :  where optional, defaults to latest stable if not provided
                 eg: $ sdk install groovy
```

Scenario: Ask for help

When

I enter "sdk help" 👍 (100ms)

Then

I see "Usage: sdk <command> [candidate] [version]" 👍 (000ms)

```
Output:

broadcast message

Usage: sdk <command> [candidate] [version]
       sdk offline <enable|disable>

   commands:
       install   or i    <candidate> [version]
       uninstall or rm   <candidate> <version>
       list      or ls   [candidate]
       use       or u    <candidate> [version]
       default   or d    <candidate> [version]
       current   or c    [candidate]
       outdated  or o    [candidate]
       version   or v
       broadcast or b
       help      or h
       offline           [enable|disable]
       selfupdate        [force]
       flush             <candidates|broadcast|archives|temp>

   candidate  :  the SDK to install: groovy, scala, grails, akka, etc.
                 use list command for comprehensive list of candidates
                 eg: $ sdk list

   version    :  where optional, defaults to latest stable if not provided
                 eg: $ sdk install groovy
```

Scenario: Enter an invalid Command

When

I enter "sdk goopoo grails" 👍 (100ms)

Then

I see "Invalid command: goopoo" 👍 (000ms)

And

I see "Usage: sdk <command> [candidate] [version]" 👍 (000ms)

```
Output:

broadcast message
Invalid command: goopoo

Usage: sdk <command> [candidate] [version]
       sdk offline <enable|disable>

   commands:
       install   or i    <candidate> [version]
       uninstall or rm   <candidate> <version>
       list      or ls   [candidate]
       use       or u    <candidate> [version]
       default   or d    <candidate> [version]
       current   or c    [candidate]
       outdated  or o    [candidate]
       version   or v
       broadcast or b
       help      or h
       offline           [enable|disable]
       selfupdate        [force]
       flush             <candidates|broadcast|archives|temp>

   candidate  :  the SDK to install: groovy, scala, grails, akka, etc.
                 use list command for comprehensive list of candidates
                 eg: $ sdk list

   version    :  where optional, defaults to latest stable if not provided
                 eg: $ sdk install groovy
```

Scenario: Enter an invalid Candidate

When
I enter "sdk install groffle" 👍 (100ms)

Then
I see "Stop! groffle is not a valid candidate." 👍 (000ms)

```
Output:

broadcast message

Stop! groffle is not a valid candidate.
```

Current Candidate

Background

Given
the internet is reachable 👍 (025ms)

And
an initialised environment 👍 (003ms)

Scenario: Display current candidate version in use

Given
the candidate "grails" version "1.3.9" is already installed and default 👍 (007ms)

And
the system is bootstrapped 👍 (101ms)

When
I enter "sdk current grails" 👍 (100ms)

Then
I see "Using grails version 1.3.9" 👍 (000ms)

```
Output:

broadcast message
Using grails version 1.3.9
```

Scenario: Display current candidate version when none is in use

Given
the candidate "grails" version "1.3.9" is already installed but not default 👍 (000ms)

And
the system is bootstrapped 👍 (101ms)

When
I enter "sdk current grails" 👍 (100ms)

Then
I see "Not using any version of grails" 👍 (000ms)

```
Output:

broadcast message
Not using any version of grails
```

Scenario: Display current candidate versions when none is specified and none is in use

Given
the candidate "grails" version "1.3.9" is already installed but not default 👍 (001ms)

And
the system is bootstrapped 👍 (101ms)

When
I enter "sdk current" 👍 (100ms)

Then
I see "No candidates are in use" 👍 (000ms)

```
Output:

broadcast message
No candidates are in use
```

Scenario: Display current candidate versions when none is specified and one is in use

Given

the candidate "grails" version "2.1.0" is already installed and default 👍 (001ms)

And

the system is bootstrapped 👍 (103ms)

When

I enter "sdk current" 👍 (100ms)

Then

I see "Using:" 👍 (000ms)

And

I see "grails: 2.1.0" 👍 (000ms)

```
Output:

broadcast message
Using:
grails: 2.1.0
```

Scenario: Display current candidate versions when none is specified and multiple are in use

Given

the candidate "groovy" version "2.0.5" is already installed and default 👍 (000ms)

And

the candidate "grails" version "2.1.0" is already installed and default 👍 (001ms)

And

the system is bootstrapped 👍 (117ms)

When

I enter "sdk current" 👍 (102ms)

Then

I see "Using:" 👍 (000ms)

And

I see "grails: 2.1.0" 👍 (000ms)

And

I see "groovy: 2.0.5" 👍 (000ms)

```
Output:

broadcast message
Using:
groovy: 2.0.5
grails: 2.1.0
```

Default Version

Background

Given

the internet is reachable 👍 (023ms)

And

an initialised environment 👍 (003ms)

Scenario: Default a candidate version that is not installed

Given
the candidate "groovy" version "2.0.5" is a valid candidate version 👍 (006ms)

And
the system is bootstrapped 👍 (101ms)

When
I enter "sdk default groovy 2.0.5" 👍 (100ms)

Then
I see "Stop! groovy 2.0.5 is not installed." 👍 (000ms)

```
Output:

broadcast message

Stop! groovy 2.0.5 is not installed.
```

Scenario: Default a candidate version that is installed and not default

Given
the candidate "groovy" version "2.0.5" is a valid candidate version 👍 (006ms)

And
the candidate "groovy" version "2.0.5" is already installed but not default 👍 (000ms)

And
the system is bootstrapped 👍 (101ms)

When
I enter "sdk default groovy 2.0.5" 👍 (100ms)

Then
I see "Default groovy version set to 2.0.5" 👍 (000ms)

And
the candidate "groovy" version "2.0.5" should be the default 👍 (001ms)

```
Output:

broadcast message

Default groovy version set to 2.0.5
```

Scenario: Default a candidate version that is installed and already default

Given
the candidate "groovy" version "2.0.5" is a valid candidate version 👍 (005ms)

And
the candidate "groovy" version "2.0.5" is already installed and default 👍 (000ms)

And
the system is bootstrapped 👍 (101ms)

When
I enter "sdk default groovy 2.0.5" 👍 (100ms)

Then
I see "Default groovy version set to 2.0.5" 👍 (000ms)

And
the candidate "groovy" version "2.0.5" should be the default 👍 (000ms)

```
Output:

broadcast message

Default groovy version set to 2.0.5
```

Scenario: Default a candidate version that does not exist

Given
the candidate "groovy" version "2.9.9" is not available for download 👍 (005ms)

And
the system is bootstrapped 👍 (101ms)

When
I enter "sdk default groovy 2.9.9" 👍 (100ms)

Then
I see "Stop! 2.9.9 is not a valid groovy version." 👍 (000ms)

```
Output:

broadcast message

Stop! 2.9.9 is not a valid groovy version.
```

Flush

Background

Given
the internet is reachable 👍 (020ms)

And
an initialised environment 👍 (004ms)

And
the system is bootstrapped 👍 (101ms)

Scenario: Flush omitting the Qualifier

When

I enter "sdk flush" 👍 (100ms)

Then

I see "Stop! Please specify what you want to flush." 👍 (000ms)

```
Output:

Stop! Please specify what you want to flush.
```

Scenario: Clear out the Candidate List

Given

the candidate "grails" is known locally 👍 (000ms)

When

I enter "sdk flush candidates" 👍 (100ms)

Then

no candidates are know locally 👍 (000ms)

And

I see "Candidates have been flushed." 👍 (000ms)

```
Output:

Candidates have been flushed.
```

Scenario: Clear out an uninitialised Candidate List

Given

I enter "sdk flush candidates" 👍 (100ms)

When

I enter "sdk flush candidates" 👍 (100ms)

Then

I see "No candidate list found so not flushed." 👍 (000ms)

```
Output:

No candidate list found so not flushed.
```

Scenario: Clean up the current Broadcast

Given

a prior Broadcast "This is an old broadcast" with id "12344" was issued 👍 (000ms)

When

I enter "sdk flush broadcast" 👍 (100ms)

Then

no broadcast message can be found 👍 (000ms)

And

I see "Broadcast has been flushed." 👍 (000ms)

```
Output:

Broadcast has been flushed.
```

Scenario: Clean up an uninitialised Broadcast

Given
the broadcast has been flushed 👍 (000ms)

When
I enter "sdk flush broadcast" 👍 (100ms)

Then
I see "No prior broadcast found so not flushed." 👍 (000ms)

```
Output:

No prior broadcast found so not flushed.
```

Scenario: Clean up the last known Remote Version

Given
a prior version "x.y.z" was detected 👍 (000ms)

When
I enter "sdk flush version" 👍 (100ms)

Then
no version token can be found 👍 (000ms)

And
I see "Version Token has been flushed." 👍 (000ms)

```
Output:

Version Token has been flushed.
```

Scenario: Clean up an uninitialised last known Remote Version

Given

the Remote Version has been flushed 👍 (000ms)

When

I enter "sdk flush version" 👍 (100ms)

Then

I see "No prior Remote Version found so not flushed." 👍 (000ms)

```
Output:

No prior Remote Version found so not flushed.
```

Scenario: Clear out the cached Archives

Given

the archive "grails-1.3.9.zip" has been cached 👍 (000ms)

When

I enter "sdk flush archives" 👍 (100ms)

Then

no archives are cached 👍 (000ms)

And

I see "1 archive(s) flushed" 👍 (000ms)

```
Output:

1 archive(s) flushed, freeing 4.0K  /tmp/sdkman-test/112ef11b-e2db-4558-a405-
3bfcdf1411e4/.sdkman/archives.
```

Scenario: Clear out the temporary space

Given

the file "res-1.2.0.zip" in temporary storage 👍 (000ms)

When

I enter "sdk flush temp" 👍 (100ms)

Then

no "res-1.2.0.zip" file is present in temporary storage 👍 (000ms)

And

I see "1 archive(s) flushed" 👍 (000ms)

```
Output:

1 archive(s) flushed, freeing 4.0K  /tmp/sdkman-test/112ef11b-e2db-4558-a405-
3bfcdf1411e4/.sdkman/tmp.
```

Idempotent Self Update

Background

Given

the internet is reachable 👍 (020ms)

And

an initialised environment 👍 (003ms)

And

the system is bootstrapped 👍 (101ms)

And

an available selfupdate 👍 (005ms)

Scenario: Attempt Self Update on an up to date system

When
I enter "sdk selfupdate" 👍 (100ms)

Then
I see "No update available at this time." 👍 (000ms)

```
Output:

No update available at this time.
```

Scenario: Force Self Update on an up to date system

When
I enter "sdk selfupdate force" 👍 (100ms)

Then
I see "Successfully upgraded SDKMAN." 👍 (000ms)

```
Output:

Successfully upgraded SDKMAN.
```

Install Candidate

Background

Given
the internet is reachable 👍 (020ms)

And
an initialised environment 👍 (003ms)

And
the system is bootstrapped 👍 (101ms)

Scenario: Install a default Candidate

Given

the default "grails" candidate is "2.1.0" 👍 (018ms)

When

I enter "sdk install grails" and answer "Y" 👍 (101ms)

Then

I see "Done installing!" 👍 (000ms)

Then

the candidate "grails" version "2.1.0" is installed 👍 (000ms)

```
Output:

broadcast message

Downloading: grails 2.1.0

  % Total    % Received % Xferd  Average Speed   Time    Time     Time  Current
                                 Dload  Upload   Total   Spent    Left  Speed
0     0    0     0    0     0      0      0 --:--:-- --:--:-- --:--:--     0  0
0    0     0    0     0      0      0 --:--:-- --:--:-- --:--:--     0
100   541  100   541    0     0  53421      0 --:--:-- --:--:-- --:--:-- 53421

Installing: grails 2.1.0
Done installing!

Do you want grails 2.1.0 to be set as default? (Y/n):
Setting grails 2.1.0 as default.
```

Scenario: Install a specific Candidate

And

the candidate "grails" version "1.3.9" is available for download 👍 (017ms)

When

I enter "sdk install grails 1.3.9" and answer "Y" 👍 (101ms)

Then

I see "Done installing!" 👍 (000ms)

Then

the candidate "grails" version "1.3.9" is installed 👍 (000ms)

```
Output:

broadcast message

Downloading: grails 1.3.9

  % Total    % Received % Xferd  Average Speed   Time    Time     Time  Current
                                 Dload  Upload   Total   Spent    Left  Speed
0     0    0     0    0     0      0      0 --:--:-- --:--:-- --:--:--     0  0
0    0     0    0     0      0      0 --:--:-- --:--:-- --:--:--     0
100   541  100   541    0     0  89986      0 --:--:-- --:--:-- --:--:-- 89986

Installing: grails 1.3.9
Done installing!

Do you want grails 1.3.9 to be set as default? (Y/n):
Setting grails 1.3.9 as default.
```

Scenario: Install a Candidate version that does not exist

Given

the candidate "grails" version "1.4.4" is not available for download 👍 (005ms)

When

I enter "sdk install grails 1.4.4" 👍 (100ms)

Then

I see "Stop! 1.4.4 is not a valid grails version." 👍 (000ms)

```
Output:

broadcast message

Stop! 1.4.4 is not a valid grails version.
```

Scenario: Install a Candidate version that is already installed

Given

the candidate "grails" version "1.3.9" is available for download 👍 (017ms)

And

the candidate "grails" version "1.3.9" is already installed and default 👍 (000ms)

When

I enter "sdk install grails 1.3.9" 👍 (100ms)

Then

I see "Stop! grails 1.3.9 is already installed." 👍 (000ms)

```
Output:

broadcast message

Stop! grails 1.3.9 is already installed.
```

Scenario: Install a candidate and select to use it

Given

the candidate "grails" version "2.1.0" is available for download 👍 (016ms)

When

I enter "sdk install grails 2.1.0" and answer "Y" 👍 (100ms)

Then

the candidate "grails" version "2.1.0" is installed 👍 (000ms)

And

I see "Done installing!" 👍 (000ms)

And

I see "Do you want grails 2.1.0 to be set as default? (Y/n)" 👍 (000ms)

And

I see "Setting grails 2.1.0 as default." 👍 (000ms)

Then

the candidate "grails" version "2.1.0" should be the default 👍 (000ms)

```
Output:

broadcast message

Downloading: grails 2.1.0

  % Total    % Received % Xferd  Average Speed   Time    Time     Time  Current
                                 Dload  Upload   Total   Spent    Left  Speed
0     0    0     0    0     0      0      0 --:--:-- --:--:-- --:--:--     0  0
0    0     0    0     0      0      0 --:--:-- --:--:-- --:--:--     0
100   541  100   541    0     0  86187      0 --:--:-- --:--:-- --:--:-- 86187

Installing: grails 2.1.0
Done installing!

Do you want grails 2.1.0 to be set as default? (Y/n):
Setting grails 2.1.0 as default.
```

Scenario: Install a candidate and select to use it automatically

Given

the candidate "grails" version "2.1.0" is available for download 👍 (023ms)

And

I have configured "sdkman_auto_answer" to "true" 👍 (000ms)

When

I enter "sdk install grails 2.1.0" 👍 (100ms)

Then

the candidate "grails" version "2.1.0" is installed 👍 (000ms)

And

I see "Done installing!" 👍 (000ms)

And

I see "Setting grails 2.1.0 as default." 👍 (000ms)

Then

the candidate "grails" version "2.1.0" should be the default 👍 (000ms)

```
Output:

broadcast message

Downloading: grails 2.1.0

  % Total    % Received % Xferd  Average Speed   Time    Time     Time  Current
                                 Dload  Upload   Total   Spent    Left  Speed

Installing: grails 2.1.0
Done installing!

Setting grails 2.1.0 as default.
```

Scenario: Install a candidate and do not select to use it

Given

the candidate "grails" version "2.1.0" is available for download 👍 (022ms)

When

I enter "sdk install grails 2.1.0" and answer "n" 👍 (100ms)

Then

the candidate "grails" version "2.1.0" is installed 👍 (000ms)

And

I see "Done installing!" 👍 (000ms)

And

I see "Do you want grails 2.1.0 to be set as default? (Y/n)" 👍 (000ms)

And

I do not see "Setting grails 2.1.0 as default." 👍 (000ms)

Then

the candidate "grails" version "2.1.0" should not be the default 👍 (001ms)

```
Output:

broadcast message

Downloading: grails 2.1.0

  % Total    % Received % Xferd  Average Speed   Time    Time     Time  Current
                                 Dload  Upload   Total   Spent    Left  Speed

List Candidate Versions

A dummy template to be served back that has the following information:
* Candidate: grails
* Current: 2.1.0
* Versions: 2.1.0,2.1.1,2.1.2 (CSV)

Background

Given

the internet is reachable 👍 (023ms)

And

an initialised environment 👍 (005ms)

Scenario: List an uninstalled available Version

Given

I do not have a "grails" candidate installed 👍 (000ms)

And

the candidate "grails" has a version list available 👍 (011ms)

And

the system is bootstrapped 👍 (107ms)

When

I enter "sdk list grails" 👍 (100ms)

Then

I see "Candidate: grails" 👍 (000ms)

```
Output:

broadcast message
Candidate: grails; Versions: ; Current:
```

Scenario: List an installed available Version not in use

Given

the candidate "grails" version "2.1.0" is already installed but not default 👍 (000ms)

And

the candidate "grails" has a version list available 👍 (005ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk list grails" 👍 (100ms)

Then

I see "Versions: 2.1.0" 👍 (000ms)

And

I do not see "Current: 2.1.0" 👍 (000ms)

```
Output:

broadcast message
Candidate: grails; Versions: 2.1.0; Current:
```

Scenario: List an installed available Version in use

Given

the candidate "grails" version "2.1.0" is already installed and default 👍 (000ms)

And

the candidate "grails" has a version list available 👍 (007ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk list grails" 👍 (100ms)

Then

I see "Current: 2.1.0" 👍 (000ms)

And

I see "Versions: 2.1.0" 👍 (000ms)

```
Output:

broadcast message
Candidate: grails; Versions: 2.1.0; Current: 2.1.0
```

Scenario: List installed multiple Versions

Given

the candidate "grails" version "2.1.0" is already installed and default 👍 (000ms)

And

the candidate "grails" version "2.0.9" is already installed but not default 👍 (000ms)

And

the candidate "grails" has a version list available 👍 (007ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk list grails" 👍 (100ms)

Then

I see "Current: 2.1.0" 👍 (000ms)

And

I see "Versions: 2.0.9,2.1.0" 👍 (000ms)

```
Output:

broadcast message
Candidate: grails; Versions: 2.0.9,2.1.0; Current: 2.1.0
```

Scenario: List an installed local version not in use

Given

I have a local candidate "grails" version "2.3-SNAPSHOT" at "/tmp/groovy-core" 👍 (001ms)

And

the candidate "groovy" version "2.3-SNAPSHOT" is already linked to "/tmp/groovy-core" 👍 (001ms)

And

the candidate "groovy" has a version list available 👍 (005ms)

And

the system is bootstrapped 👍 (102ms)

When

I enter "sdk list groovy" 👍 (100ms)

Then

I see "Versions: 2.3-SNAPSHOT" 👍 (000ms)

And

I do not see "Current: 2.3-SNAPSHOT" 👍 (000ms)

```
Output:

broadcast message
Candidate: groovy; Versions: 2.3-SNAPSHOT; Current:
```

Scenario: List an installed local Version in use

Given

I have a local candidate "groovy" version "2.2-SNAPSHOT" at "/tmp/groovy-core" 👍 (001ms)

And

the candidate "groovy" version "2.2-SNAPSHOT" is already linked to "/tmp/groovy-core" 👍 (000ms)

And

the candidate "groovy" version "2.2-SNAPSHOT" is the default 👍 (000ms)

And

the candidate "groovy" has a version list available 👍 (005ms)

And

the system is bootstrapped 👍 (126ms)

When

I enter "sdk list groovy" 👍 (100ms)

Then

I see "Current: 2.2-SNAPSHOT" 👍 (000ms)

And

I see "Versions: 2.2-SNAPSHOT" 👍 (000ms)

```
Output:

broadcast message
Candidate: groovy; Versions: 2.2-SNAPSHOT; Current: 2.2-SNAPSHOT
```

List Candidates

Background

Given

the internet is reachable 👍 (018ms)

And

an initialised environment 👍 (004ms)

Scenario: A List of Available Candidates can be viewed

Given

the system is bootstrapped 👍 (101ms)

And

The candidate list is available 👍 (004ms)

When

I enter "sdk list" 👍 (100ms)

Then

I see "Candidate List" 👍 (000ms)

```
Output:

broadcast message
Candidate List
```

Local Development Versions

Background

Given

the internet is reachable 👍 (016ms)

And

an initialised environment 👍 (003ms)

Scenario: Install a new local development version

Given

the candidate "groovy" version "2.1-SNAPSHOT" is not available for download 👍 (005ms)

And

I have a local candidate "groovy" version "2.1-SNAPSHOT" at "/tmp/groovy-core" 👍 (000ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk install groovy 2.1-SNAPSHOT /tmp/groovy-core" 👍 (100ms)

Then

I see "Linking groovy 2.1-SNAPSHOT to /tmp/groovy-core" 👍 (000ms)

And

the candidate "groovy" version "2.1-SNAPSHOT" is linked to "/tmp/groovy-core" 👍 (000ms)

```
Output:

broadcast message
Linking groovy 2.1-SNAPSHOT to /tmp/groovy-core
Done installing!
```

Scenario: Attempt installing a local development version that already exists

Given

the candidate "groovy" version "2.1-SNAPSHOT" is not available for download 👍 (004ms)

And

the candidate "groovy" version "2.1-SNAPSHOT" is already linked to "/tmp/groovy-core" 👍 (000ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk install groovy 2.1-SNAPSHOT /tmp/groovy-core" 👍 (100ms)

Then

I see "Stop! groovy 2.1-SNAPSHOT is already installed." 👍 (000ms)

And

the candidate "groovy" version "2.1-SNAPSHOT" is linked to "/tmp/groovy-core" 👍 (000ms)

```
Output:

broadcast message

Stop! groovy 2.1-SNAPSHOT is already installed.
```

Scenario: Uninstall a local development version

Given

the candidate "groovy" version "2.1-SNAPSHOT" is already linked to "/tmp/groovy-core" 👍 (000ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk uninstall groovy 2.1-SNAPSHOT" 👍 (100ms)

Then

I see "Uninstalling groovy 2.1-SNAPSHOT" 👍 (000ms)

And

the candidate "groovy" version "2.1-SNAPSHOT" is not installed 👍 (000ms)

```
Output:

broadcast message

Uninstalling groovy 2.1-SNAPSHOT...
```

Scenario: Attempt uninstalling a local development version that is not installed

Given

the candidate "groovy" version "2.1-SNAPSHOT" is not installed 👍 (000ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk uninstall groovy 2.1-SNAPSHOT" 👍 (100ms)

Then

I see "groovy 2.1-SNAPSHOT is not installed." 👍 (000ms)

```
Output:

broadcast message

groovy 2.1-SNAPSHOT is not installed.
```

Scenario: Make the local development version the default for the candidate

Given
the candidate "groovy" version "2.0.6" is already installed and default 👍 (000ms)

And
the candidate "groovy" version "2.1-SNAPSHOT" is not available for download 👍 (006ms)

And
the candidate "groovy" version "2.1-SNAPSHOT" is already linked to "/tmp/groovy-core" 👍 (001ms)

And
the system is bootstrapped 👍 (101ms)

When
I enter "sdk default groovy 2.1-SNAPSHOT" 👍 (100ms)

Then
I see "Default groovy version set to 2.1-SNAPSHOT" 👍 (000ms)

And
the candidate "groovy" version "2.1-SNAPSHOT" should be the default 👍 (000ms)

```
Output:

broadcast message

Default groovy version set to 2.1-SNAPSHOT
```

Scenario: Use a local development version

Given

the candidate "groovy" version "2.0.6" is already installed and default 👍 (000ms)

And

the candidate "groovy" version "2.1-SNAPSHOT" is not available for download 👍 (005ms)

And

the candidate "groovy" version "2.1-SNAPSHOT" is already linked to "/tmp/groovy-core" 👍 (000ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk use groovy 2.1-SNAPSHOT" 👍 (100ms)

Then

I see "Using groovy version 2.1-SNAPSHOT in this shell" 👍 (000ms)

And

the candidate "groovy" version "2.1-SNAPSHOT" should be in use 👍 (100ms)

```
Output:

Groovy Version: 2.1-SNAPSHOT
```

Mnemonics

Background

Given

the internet is reachable 👍 (016ms)

And

an initialised environment 👍 (003ms)

Scenario: Shortcut for listing an uninstalled available Version

Given

I do not have a "grails" candidate installed 👍 (000ms)

And

a "grails" list view is available for consumption 👍 (005ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk l grails" 👍 (100ms)

Then

I see "Available Grails Versions" 👍 (000ms)

```
Output:

broadcast message
Available Grails Versions
```

Scenario: Alternate shortcut for listing uninstalled available Version

Given

I do not have a "grails" candidate installed 👍 (000ms)

And

a "grails" list view is available for consumption 👍 (005ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk ls grails" 👍 (100ms)

Then

I see "Available Grails Versions" 👍 (000ms)

```
Output:

broadcast message
Available Grails Versions
```

Scenario: Shortcut for asking help

Given

the system is bootstrapped 👍 (101ms)

When

I enter "sdk h" 👍 (100ms)

Then

I see "Usage: sdk <command> [candidate] [version]" 👍 (000ms)

```
Output:

broadcast message

Usage: sdk <command> [candidate] [version]
       sdk offline <enable|disable>

   commands:
       install   or i    <candidate> [version]
       uninstall or rm   <candidate> <version>
       list      or ls   [candidate]
       use       or u    <candidate> [version]
       default   or d    <candidate> [version]
       current   or c    [candidate]
       outdated  or o    [candidate]
       version   or v
       broadcast or b
       help      or h
       offline           [enable|disable]
       selfupdate        [force]
       flush             <candidates|broadcast|archives|temp>

   candidate  :  the SDK to install: groovy, scala, grails, akka, etc.
                 use list command for comprehensive list of candidates
                 eg: $ sdk list

   version    :  where optional, defaults to latest stable if not provided
                 eg: $ sdk install groovy
```

Scenario: Shortcut for displaying current Candidate Version in use

Given

the candidate "grails" version "1.3.9" is already installed and default 👍 (001ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk c grails" 👍 (100ms)

Then

I see "Using grails version 1.3.9" 👍 (000ms)

```
Output:

broadcast message
Using grails version 1.3.9
```

Scenario: Shortcut for displaying current Candidate Versions

Given

the candidate "groovy" version "2.0.5" is already installed and default 👍 (000ms)

And

the candidate "grails" version "2.1.0" is already installed and default 👍 (000ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk c" 👍 (100ms)

Then

I see "Using:" 👍 (000ms)

And

I see "grails: 2.1.0" 👍 (000ms)

And

I see "groovy: 2.0.5" 👍 (000ms)

```
Output:

broadcast message
Using:
groovy: 2.0.5
grails: 2.1.0
```

Scenario: Shortcut for displaying outdated Candidate Version in use

Given

the candidate "grails" version "1.3.9" is already installed and default 👍 (000ms)

And

the default "grails" candidate is "2.4.4" 👍 (013ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk o grails" 👍 (100ms)

Then

I see "Outdated:" 👍 (000ms)

And

I see "grails (1.3.9 < 2.4.4)" 👍 (000ms)

```
Output:

broadcast message
Outdated:
grails (1.3.9 < 2.4.4)
```

Scenario: Shortcut for displaying outdated Candidate Versions

Given

the candidate "grails" version "1.3.9" is already installed and default 👍 (000ms)

And

the default "grails" candidate is "2.4.4" 👍 (013ms)

And

the candidate "groovy" version "2.0.5" is already installed and default 👍 (001ms)

And

the default "groovy" candidate is "2.4.1" 👍 (013ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk o" 👍 (100ms)

Then

I see "Outdated:" 👍 (000ms)

And

I see "grails (1.3.9 < 2.4.4)" 👍 (000ms)

And

I see "groovy (2.0.5 < 2.4.1)" 👍 (000ms)

```
Output:

broadcast message
Outdated:
groovy (2.0.5 < 2.4.1)
grails (1.3.9 < 2.4.4)
```

Scenario: Shortcut for installing a Candidate Version

Given

the candidate "grails" version "2.1.0" is not installed 👍 (000ms)

And

the candidate "grails" version "2.1.0" is available for download 👍 (012ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk i grails 2.1.0" and answer "Y" 👍 (100ms)

Then

I see "Installing: grails 2.1.0" 👍 (000ms)

And

the candidate "grails" version "2.1.0" is installed 👍 (000ms)

```
Output:

broadcast message

Downloading: grails 2.1.0

  % Total    % Received % Xferd  Average Speed   Time    Time     Time  Current
                                 Dload  Upload   Total   Spent    Left  Speed

0    0     0    0     0      0      0 --:--:-- --:--:-- --:--:--     0
100   541  100   541    0     0  91570      0 --:--:-- --:--:-- --:--:-- 91570

Installing: grails 2.1.0
Done installing!

Do you want grails 2.1.0 to be set as default? (Y/n):
Setting grails 2.1.0 as default.
```

Scenario: Shortcut for uninstalling a Candidate Version

Given

the candidate "groovy" version "2.0.5" is already installed and default 👍 (000ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk rm groovy 2.0.5" 👍 (100ms)

Then

I see "Uninstalling groovy 2.0.5" 👍 (000ms)

And

the candidate "groovy" version "2.0.5" is not installed 👍 (000ms)

```
Output:

broadcast message

Unselecting groovy 2.0.5...

Uninstalling groovy 2.0.5...
```

Scenario: Shortcut for showing the current Version of sdkman

Given

the system is bootstrapped 👍 (101ms)

When

I enter "sdk v" 👍 (100ms)

Then

I see "SDKMAN x.y.z" 👍 (000ms)

```
Output:

broadcast message
SDKMAN x.y.z
```

Scenario: Shortcut for using a candidate version that is installed

Given

the candidate "grails" version "2.1.0" is already installed and default 👍 (000ms)

And

the candidate "grails" version "2.1.0" is a valid candidate version 👍 (004ms)

And

the candidate "grails" version "1.3.9" is already installed but not default 👍 (000ms)

And

the candidate "grails" version "1.3.9" is a valid candidate version 👍 (004ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk u grails 1.3.9" 👍 (100ms)

Then

I see "Using grails version 1.3.9 in this shell." 👍 (000ms)

Then

the candidate "grails" version "1.3.9" should be in use 👍 (100ms)

And

the candidate "grails" version "2.1.0" should be the default 👍 (000ms)

```
Output:

Grails Version: 1.3.9
```

Scenario: Shortcut for defaulting a Candidate Version that is installed and not default

Given

the candidate "groovy" version "2.0.5" is already installed but not default 👍 (000ms)

And

the candidate "groovy" version "2.0.5" is a valid candidate version 👍 (004ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk d groovy 2.0.5" 👍 (100ms)

Then

I see "Default groovy version set to 2.0.5" 👍 (000ms)

And

the candidate "groovy" version "2.0.5" should be the default 👍 (000ms)

```
Output:

broadcast message

Default groovy version set to 2.0.5
```

Scenario: Shortcut for a Broadcast command issued

Given

no prior Broadcast was received 👍 (000ms)

And

a new Broadcast "This is a LIVE Broadcast!" with id "12345" is available 👍 (008ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk b" 👍 (100ms)

Then

I see "This is a LIVE Broadcast!" 👍 (000ms)

```
Output:

This is a LIVE Broadcast!
```

Offline Mode

Scenario: Enter an invalid offline mode

Given
offline mode is disabled with reachable internet 👍 (012ms)

And
an initialised environment 👍 (003ms)

And
the system is bootstrapped 👍 (101ms)

When
I enter "sdk offline grails" 👍 (100ms)

Then
I see "Stop! grails is not a valid offline mode." 👍 (000ms)

```
Output:

broadcast message

Stop! grails is not a valid offline mode.
```

Scenario: Issue Offline command without qualification

Given
offline mode is disabled with reachable internet 👍 (012ms)

And
an initialised environment 👍 (003ms)

And
the system is bootstrapped 👍 (101ms)

When
I enter "sdk offline" 👍 (100ms)

Then
I see "Offline mode enabled." 👍 (000ms)

```
Output:

broadcast message
Offline mode enabled.
```

Scenario: Enable Offline Mode with internet reachable

Given
offline mode is disabled with reachable internet 👍 (012ms)

And
an initialised environment 👍 (004ms)

And
the system is bootstrapped 👍 (101ms)

When
I enter "sdk offline enable" 👍 (100ms)

Then
I see "Offline mode enabled." 👍 (000ms)

And
I do not see "INTERNET NOT REACHABLE!" 👍 (000ms)

When
I enter "sdk install grails 2.1.0" 👍 (100ms)

Then
I do not see "INTERNET NOT REACHABLE!" 👍 (000ms)

And
I see "Stop! grails 2.1.0 is not available while offline." 👍 (000ms)

```
Output:

Stop! grails 2.1.0 is not available while offline.
```

Scenario: Disable Offline Mode with internet reachable

Given

offline mode is enabled with reachable internet 👍 (013ms)

And

the candidate "grails" version "2.1.0" is available for download 👍 (012ms)

And

an initialised environment 👍 (003ms)

And

the system is bootstrapped 👍 (102ms)

When

I enter "sdk offline disable" 👍 (100ms)

Then

I see "Online mode re-enabled!" 👍 (000ms)

When

I enter "sdk install grails 2.1.0" and answer "Y" 👍 (100ms)

Then

I see "Done installing!" 👍 (000ms)

And

the candidate "grails" version "2.1.0" is installed 👍 (000ms)

```
Output:

broadcast message

Downloading: grails 2.1.0

  % Total    % Received % Xferd  Average Speed   Time    Time     Time  Current
                                 Dload  Upload   Total   Spent    Left  Speed
0     0    0     0    0     0      0      0 --:--:-- --:--:-- --:--:--     0  0
0    0     0    0     0      0      0 --:--:-- --:--:-- --:--:--     0

Installing: grails 2.1.0
Done installing!

Do you want grails 2.1.0 to be set as default? (Y/n):
Setting grails 2.1.0 as default.
```

Scenario: Disable Offline Mode with internet unreachable

Given
offline mode is enabled with unreachable internet 👍 (000ms)

And
an initialised environment 👍 (007ms)

And
the system is bootstrapped 👍 (101ms)

When
I enter "sdk offline disable" 👍 (100ms)

Then
I see "Online mode re-enabled!" 👍 (000ms)

When
I enter "sdk install grails 2.1.0" 👍 (100ms)

Then
I see "INTERNET NOT REACHABLE!" 👍 (000ms)

And
I see "Stop! grails 2.1.0 is not available while offline." 👍 (000ms)

```
Output:

==== INTERNET NOT REACHABLE! ==============================

 Some functionality is disabled or only partially available.
 If this persists, please enable the offline mode:

   $ sdk offline

============================================================

Stop! grails 2.1.0 is not available while offline.
```

Scenario: Recall a broadcast while in Offline Mode

Given
offline mode is enabled with reachable internet 👍 (012ms)

And
an initialised environment 👍 (003ms)

And
the system is bootstrapped 👍 (101ms)

When
a prior Broadcast "This is an OLD Broadcast!" with id "12344" was issued 👍 (000ms)

And
I enter "sdk broadcast" 👍 (100ms)

Then
I see "This is an OLD Broadcast!" 👍 (000ms)

```
Output:

This is an OLD Broadcast!
```

Scenario: Determine the sdkman version while in Offline Mode

Given
offline mode is enabled with reachable internet 👍 (012ms)

And
an initialised environment 👍 (003ms)

And
the system is bootstrapped 👍 (101ms)

When
I enter "sdk version" 👍 (100ms)

Then
I see the current sdkman version 👍 (000ms)

```
Output:

SDKMAN x.y.z
```

Scenario: List candidate versions found while in Offline Mode

Given

offline mode is enabled with reachable internet 👍 (012ms)

And

an initialised environment 👍 (003ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk list grails" 👍 (102ms)

Then

I see "Offline: only showing installed grails versions" 👍 (000ms)

```
Output:

------------------------------------------------------------
Offline: only showing installed grails versions
------------------------------------------------------------

   None installed!
------------------------------------------------------------
* - installed
> - currently in use
------------------------------------------------------------
```

Scenario: Use an uninstalled candidate version while in Offline Mode

Given

offline mode is enabled with reachable internet 👍 (012ms)

And

the candidate "grails" version "1.3.9" is already installed and default 👍 (001ms)

And

the candidate "grails" version "2.1.0" is not installed 👍 (000ms)

And

an initialised environment 👍 (005ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk use grails 2.1.0" 👍 (100ms)

Then

I see "Stop! grails 2.1.0 is not available while offline." 👍 (000ms)

```
Output:

Stop! grails 2.1.0 is not available while offline.
```

Scenario: Set the default to an uninstalled candidate version while in Offline Mode

Given

offline mode is enabled with reachable internet 👍 (012ms)

And

the candidate "grails" version "1.3.9" is already installed and default 👍 (001ms)

And

an initialised environment 👍 (003ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk default grails 2.1.0" 👍 (100ms)

Then

I see "Stop! grails 2.1.0 is not available while offline." 👍 (000ms)

```
Output:

Stop! grails 2.1.0 is not available while offline.
```

Scenario: Install a candidate version that is not installed while in Offline Mode

Given

offline mode is enabled with reachable internet 👍 (012ms)

And

the candidate "grails" version "2.1.0" is not installed 👍 (000ms)

And

an initialised environment 👍 (003ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk install grails 2.1.0" 👍 (100ms)

Then

I see "Stop! grails 2.1.0 is not available while offline." 👍 (000ms)

```
Output:

Stop! grails 2.1.0 is not available while offline.
```

Scenario: Uninstall a candidate version while in Offline Mode

Given

offline mode is enabled with reachable internet 👍 (012ms)

And

the candidate "grails" version "2.1.0" is already installed and default 👍 (001ms)

And

an initialised environment 👍 (003ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk uninstall grails 2.1.0" 👍 (100ms)

And

the candidate "grails" version "2.1.0" is not installed 👍 (000ms)

```
Output:

Unselecting grails 2.1.0...

Uninstalling grails 2.1.0...
```

Scenario: Display the current version of a candidate while in Offline Mode

Given

offline mode is enabled with reachable internet 👍 (013ms)

And

the candidate "grails" version "2.1.0" is already installed and default 👍 (001ms)

And

an initialised environment 👍 (003ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk current grails" 👍 (100ms)

Then

I see "Using grails version 2.1.0" 👍 (000ms)

```
Output:

Using grails version 2.1.0
```

Scenario: Request help while in Offline Mode

Given

offline mode is enabled with reachable internet 👍 (018ms)

And

an initialised environment 👍 (003ms)

And

the system is bootstrapped 👍 (124ms)

When

I enter "sdk help" 👍 (100ms)

Then

I see "Usage: sdk <command> [candidate] [version]" 👍 (000ms)

```
Output:

Usage: sdk <command> [candidate] [version]
       sdk offline <enable|disable>

   commands:
       install   or i    <candidate> [version]
       uninstall or rm   <candidate> <version>
       list      or ls   [candidate]
       use       or u    <candidate> [version]
       default   or d    <candidate> [version]
       current   or c    [candidate]
       outdated  or o    [candidate]
       version   or v
       broadcast or b
       help      or h
       offline           [enable|disable]
       selfupdate        [force]
       flush             <candidates|broadcast|archives|temp>

   candidate  :  the SDK to install: groovy, scala, grails, akka, etc.
                 use list command for comprehensive list of candidates
                 eg: $ sdk list

   version    :  where optional, defaults to latest stable if not provided
                 eg: $ sdk install groovy
```

Scenario: Attempt self-update while in Offline Mode

Given
offline mode is enabled with reachable internet 👍 (012ms)

And
an initialised environment 👍 (003ms)

And
the system is bootstrapped 👍 (101ms)

When
I enter "sdk selfupdate" 👍 (100ms)

Then
I see "This command is not available while offline." 👍 (000ms)

```
Output:

This command is not available while offline.
```

Outdated Candidate

Background

Given
the internet is reachable 👍 (016ms)

And
an initialised environment 👍 (003ms)

Scenario: Display outdated candidate version in use when it is outdated

Given

the candidate "grails" version "1.3.9" is already installed and default 👍 (000ms)

And

the default "grails" candidate is "2.4.4" 👍 (013ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk outdated grails" 👍 (100ms)

Then

I see "Outdated:" 👍 (000ms)

And

I see "grails (1.3.9 < 2.4.4)" 👍 (000ms)

```
Output:

broadcast message
Outdated:
grails (1.3.9 < 2.4.4)
```

Scenario: Display outdated candidate version in use when it is not outdated

Given

the candidate "grails" version "1.3.9" is already installed and default 👍 (001ms)

And

the default "grails" candidate is "1.3.9" 👍 (014ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk outdated grails" 👍 (100ms)

Then

I see "grails is up-to-date" 👍 (000ms)

```
Output:

broadcast message
grails is up-to-date
```

Scenario: Display outdated candidate version when none is in use

Given

the candidate "grails" does not exist locally 👍 (000ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk outdated grails" 👍 (100ms)

Then

I see "Not using any version of grails" 👍 (000ms)

```
Output:

broadcast message
Not using any version of grails
grails is up-to-date
```

Scenario: Display outdated candidate versions when none is specified and none is in use

Given

the candidate "grails" does not exist locally 👍 (000ms)

And

the system is bootstrapped 👍 (102ms)

When

I enter "sdk outdated" 👍 (100ms)

Then

I see "No candidates are in use" 👍 (000ms)

```
Output:

broadcast message
No candidates are in use
```

Scenario: Display outdated candidate versions when none is specified and one is in use

Given

the candidate "grails" version "1.3.9" is already installed and default 👍 (001ms)

And

the default "grails" candidate is "2.4.4" 👍 (015ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk outdated" 👍 (100ms)

Then

I see "Outdated:" 👍 (000ms)

And

I see "grails (1.3.9 < 2.4.4)" 👍 (000ms)

```
Output:

broadcast message
Outdated:
grails (1.3.9 < 2.4.4)
```

Scenario: Display outdated candidate versions when none is specified and multiple are in use

Given

the candidate "grails" version "1.3.9" is already installed and default 👍 (000ms)

And

the default "grails" candidate is "2.4.4" 👍 (016ms)

And

the candidate "groovy" version "2.0.5" is already installed and default 👍 (000ms)

And

the default "groovy" candidate is "2.4.1" 👍 (012ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk outdated" 👍 (100ms)

Then

I see "Outdated:" 👍 (000ms)

And

I see "grails (1.3.9 < 2.4.4)" 👍 (000ms)

And

I see "groovy (2.0.5 < 2.4.1)" 👍 (000ms)

```
Output:

broadcast message
Outdated:
groovy (2.0.5 < 2.4.1)
grails (1.3.9 < 2.4.4)
```

Scenario: Display outdated candidate versions when none specified and multiple in use but not outdated

Given

the candidate "grails" version "1.3.9" is already installed and default 👍 (000ms)

And

the default "grails" candidate is "1.3.9" 👍 (012ms)

And

the candidate "groovy" version "2.0.5" is already installed and default 👍 (000ms)

And

the default "groovy" candidate is "2.0.5" 👍 (012ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk outdated" 👍 (100ms)

Then

I see "All candidates are up-to-date" 👍 (000ms)

```
Output:

broadcast message
All candidates are up-to-date
```

Path Initialisation

Background

Given

the internet is reachable 👍 (016ms)

And

an initialised environment 👍 (003ms)

Scenario: sdkman is initialised for the first time

Given

the candidate "grails" version "2.1.0" is already installed and default 👍 (000ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "echo $PATH" 👍 (100ms)

Then

I see a single occurrence of "grails" 👍 (000ms)

```
Output:

/tmp/sdkman-test/112ef11b-e2db-4558-a405-
3bfcdf1411e4/.sdkman/candidates/grails/current/bin:/tmp/sdkman-test/112ef11b-
e2db-4558-a405-3bfcdf1411e4/bin:/usr/sbin:/usr/bin:/sbin:/bin
```

Scenario: sdkman is initialised a subsequent time

Given

the candidate "grails" version "2.1.0" is already installed and default 👍 (000ms)

And

the system is bootstrapped 👍 (101ms)

And

the system is bootstrapped again 👍 (100ms)

And

I enter "echo $PATH" 👍 (100ms)

Then

I see a single occurrence of "grails" 👍 (000ms)

```
Output:

/tmp/sdkman-test/112ef11b-e2db-4558-a405-
3bfcdf1411e4/.sdkman/candidates/grails/current/bin:/tmp/sdkman-test/112ef11b-
e2db-4558-a405-3bfcdf1411e4/bin:/usr/sbin:/usr/bin:/sbin:/bin
```

Scenario: Install a candidate and see it on the PATH

Given

the system is bootstrapped 👍 (101ms)

When

I enter "echo $PATH" 👍 (100ms)

Then

I see no occurrences of "grails" 👍 (000ms)

```
Output:

/tmp/sdkman-test/112ef11b-e2db-4558-a405-
3bfcdf1411e4/bin:/usr/sbin:/usr/bin:/sbin:/bin
```

Scenario: Install a candidate and see it on the PATH

And

the candidate "grails" version "2.1.0" is available for download 👍 (013ms)

And

the system is bootstrapped 👍 (101ms)

And

I enter "sdk install grails 2.1.0" and answer "Y" 👍 (100ms)

When

I enter "echo $PATH" 👍 (100ms)

Then

I see a single occurrence of "grails" 👍 (000ms)

```
Output:
/tmp/sdkman-test/112ef11b-e2db-4558-a405-
3bfcdf1411e4/.sdkman/candidates/grails/current/bin:/tmp/sdkman-test/112ef11b-
e2db-4558-a405-3bfcdf1411e4/bin:/usr/sbin:/usr/bin:/sbin:/bin
```

Scenario: Install multiple candidate versions and see it once on the PATH

Given

the candidate "grails" version "1.3.9" is available for download 👍 (013ms)

And

the candidate "grails" version "2.1.0" is available for download 👍 (011ms)

And

the system is bootstrapped 👍 (101ms)

And

I enter "sdk install grails 1.3.9" and answer "Y" 👍 (100ms)

And

I enter "sdk install grails 2.1.0" and answer "Y" 👍 (100ms)

When

I enter "echo $PATH" 👍 (100ms)

Then

I see a single occurrence of "grails" 👍 (000ms)

```
Output:

/tmp/sdkman-test/112ef11b-e2db-4558-a405-
3bfcdf1411e4/.sdkman/candidates/grails/current/bin:/tmp/sdkman-test/112ef11b-
e2db-4558-a405-3bfcdf1411e4/bin:/usr/sbin:/usr/bin:/sbin:/bin
```

Self Update

Background

Given

the internet is reachable 👍 (015ms)

Scenario: Force a Selfupdate

Given

an initialised environment 👍 (003ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk selfupdate force" 👍 (100ms)

Then

I do not see "A new version of SDKMAN is available..." 👍 (000ms)

And

I do not see "Would you like to upgrade now? (Y/n)" 👍 (000ms)

And

I do not see "Not upgrading today..." 👍 (000ms)

And

I see "Updating SDKMAN..." 👍 (000ms)

And

I see "Successfully upgraded SDKMAN." 👍 (000ms)

```
Output:

Updating SDKMAN...
Purge existing scripts...
Refresh directory structure...
Prime the config file...
Extract script archive...
Unziping scripts to: /tmp/sdkman-test/112ef11b-e2db-4558-a405-
3bfcdf1411e4/.sdkman/tmp/stage
Moving sdkman-init file to bin folder...
Move remaining module scripts to src folder: /tmp/sdkman-test/112ef11b-e2db-4558-
a405-3bfcdf1411e4/.sdkman/src
Clean up staging folder...

Successfully upgraded SDKMAN.

Please open a new terminal, or run the following in the existing one:

    source "/tmp/sdkman-test/112ef11b-e2db-4558-a405-
3bfcdf1411e4/.sdkman/bin/sdkman-init.sh"
```

Scenario: Selfupdate when out of date

Given

an outdated initialised environment 👍 (004ms)

And

the system is bootstrapped 👍 (103ms)

When

I enter "sdk selfupdate" 👍 (100ms)

Then

I do not see "A new version of SDKMAN is available..." 👍 (000ms)

And

I do not see "Would you like to upgrade now? (Y/n)" 👍 (000ms)

And

I do not see "Not upgrading today..." 👍 (000ms)

And

I see "Updating SDKMAN..." 👍 (000ms)

And

I see "Successfully upgraded SDKMAN." 👍 (000ms)

```
Output:

Updating SDKMAN...
Purge existing scripts...
Refresh directory structure...
Prime the config file...

Scenario: Do not automatically Selfupdate

Given
an outdated initialised environment 👍 (003ms)

And
the configuration file has been primed with "sdkman_auto_selfupdate=false" 👍 (000ms)

And
the system is bootstrapped 👍 (101ms)

When
I enter "sdk help" and answer "n" 👍 (100ms)

Then
I see "A new version of SDKMAN is available..." 👍 (000ms)

And
I see "Would you like to upgrade now? (Y/n)" 👍 (000ms)

And

I see "Not upgrading today..." 👍 (000ms)

And

I do not see "Successfully upgraded SDKMAN." 👍 (000ms)

```
Output:

broadcast message

Usage: sdk <command> [candidate] [version]
       sdk offline <enable|disable>

   commands:
       install   or i    <candidate> [version]
       uninstall or rm   <candidate> <version>
       list      or ls   [candidate]
       use       or u    <candidate> [version]
       default   or d    <candidate> [version]
       current   or c    [candidate]
       outdated  or o    [candidate]
       version   or v
       broadcast or b
       help      or h
       offline           [enable|disable]
       selfupdate        [force]
       flush             <candidates|broadcast|archives|temp>

   candidate  :  the SDK to install: groovy, scala, grails, akka, etc.
                 use list command for comprehensive list of candidates
                 eg: $ sdk list

   version    :  where optional, defaults to latest stable if not provided
                 eg: $ sdk install groovy

ATTENTION: A new version of SDKMAN is available...

The current version is x.y.z, but you have x.y.y.

Would you like to upgrade now? (Y/n)Not upgrading today...
```

Scenario: Bother the user with Upgrade message once a day

Given

an outdated initialised environment 👍 (003ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk help" and answer "N" 👍 (100ms)

Then

I see "A new version of SDKMAN is available..." 👍 (000ms)

And

I see "Would you like to upgrade now? (Y/n)" 👍 (000ms)

And

I see "Not upgrading today..." 👍 (000ms)

And

I enter "sdk help" 👍 (100ms)

Then

I do not see "A new version of SDKMAN is available..." 👍 (000ms)

And

I do not see "Would you like to upgrade now? (Y/n)" 👍 (000ms)

And

I do not see "Not upgrading now..." 👍 (000ms)

And

I do not see "Successfully upgraded SDKMAN." 👍 (000ms)

```
Output:

Usage: sdk <command> [candidate] [version]
       sdk offline <enable|disable>

   commands:
       install   or i    <candidate> [version]
       uninstall or rm   <candidate> <version>
       list      or ls   [candidate]
       use       or u    <candidate> [version]
       default   or d    <candidate> [version]
       current   or c    [candidate]
       outdated  or o    [candidate]
       version   or v
       broadcast or b
       help      or h
       offline           [enable|disable]
       selfupdate        [force]
       flush             <candidates|broadcast|archives|temp>

       flush             <candidates|broadcast|archives|temp>

   candidate  :  the SDK to install: groovy, scala, grails, akka, etc.
                 use list command for comprehensive list of candidates
                 eg: $ sdk list

   version    :  where optional, defaults to latest stable if not provided
                 eg: $ sdk install groovy
```

Scenario: Use a candidate version that is installed

Given

the candidate "grails" version "2.1.0" is already installed and default 👍 (000ms)

And

the candidate "grails" version "1.3.9" is a valid candidate version 👍 (004ms)

And

the candidate "grails" version "1.3.9" is already installed but not default 👍 (002ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk use grails 1.3.9" 👍 (100ms)

Then

I see "Using grails version 1.3.9 in this shell." 👍 (000ms)

Then

the candidate "grails" version "1.3.9" should be in use 👍 (100ms)

And

the candidate "grails" version "2.1.0" should be the default 👍 (000ms)

```
Output:

Grails Version: 1.3.9
```

Scenario: Use a candidate version that is not installed

Given

the candidate "grails" version "1.3.9" is available for download 👍 (015ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk use grails 1.3.9" and answer "Y" 👍 (100ms)

Then

I see "Using grails version 1.3.9 in this shell." 👍 (000ms)

And

the candidate "grails" version "1.3.9" should be in use 👍 (100ms)

```
Output:

Grails version: 1.3.9
```

Scenario: Use a candidate version that is automatically installed

Given

I have configured "sdkman_auto_answer" to "true" 👍 (000ms)

And

the candidate "grails" version "1.3.9" is available for download 👍 (017ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk use grails 1.3.9" 👍 (100ms)

Then

I see "Stop! grails 1.3.9 is not installed." 👍 (000ms)

Then

I see "Using grails version 1.3.9 in this shell." 👍 (000ms)

And

the candidate "grails" version "1.3.9" should be in use 👍 (100ms)

```
Output:

Grails version: 1.3.9
```

Scenario: Use a candidate version that does not exist

Given

the candidate "groovy" version "1.9.9" is not available for download 👍 (005ms)

And

the system is bootstrapped 👍 (104ms)

When

I enter "sdk use groovy 1.9.9" 👍 (100ms)

Then

I see "Stop! 1.9.9 is not a valid groovy version." 👍 (000ms)

```
Output:

broadcast message

Stop! 1.9.9 is not a valid groovy version.
```

Scenario: Use a candidate version that only exists locally

Given

the candidate "grails" version "2.0.0.M1" is not available for download 👍 (004ms)

And

the candidate "grails" version "2.0.0.M1" is already installed but not default 👍 (000ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk use grails 2.0.0.M1" 👍 (100ms)

Then

I see "Using grails version 2.0.0.M1 in this shell." 👍 (000ms)

```
Output:

broadcast message
Setting grails version 2.0.0.M1 as default.

Using grails version 2.0.0.M1 in this shell.
```

Scenario: Use an uninstalled candidate version of an uninstalled candidate and it becomes default

Given

the candidate "grails" version "1.3.9" is available for download 👍 (011ms)

And

the candidate "grails" does not exist locally 👍 (000ms)

And

the system is bootstrapped 👍 (101ms)

When

I enter "sdk use grails 1.3.9" and answer "Y" 👍 (100ms)

Then

I see "Setting grails version 1.3.9 as default." 👍 (000ms)

And

I see "Using grails version 1.3.9 in this shell." 👍 (000ms)

And

the candidate "grails" version "1.3.9" is installed 👍 (000ms)

And

the candidate "grails" version "1.3.9" should be the default 👍 (000ms)

```
Output:

broadcast message
